

Firefall Maple

(Acer freemanii 'Firefall')

Mature Height: 40'-50'

Mature Spread: 30'-35'

Growth Rate: Fast

Fall Color: Red

Firefall maple is a hardy, northern variety of hybrid maple that was developed in cooperation by the University of Minnesota and the Minnesota Landscape Arboretum. Due to this, it will tolerate colder temperatures and goes dormant earlier in the fall. It has a bright orange to deep red fall color. It is one of the first trees to turn

color in the fall. Its leaves are more deeply lobed than most maples, giving it a lace-like appearance. It is seedless like most hybrid maples, making it an excellent choice for shade in any yard. The shape is upright and oval, requiring little maintenance to maintain a beautiful shape in the landscape.
