

Swedish Columnar Aspen

(Populus tremula 'Erecta')

Mature Height: 35'-40'

Mature Spread: 10'-12'

Growth Rate: Fast

Fall color: Yellow to red

Swedish Columnar Aspen is a very tight, columnar tree that makes an excellent screen or accent tree. The leaves tremble in the wind very similar to quaking aspen. It does well in groups or as a single accent plant. It will grow in both wet soils and drought conditions. It is very cold

hardy and will grow almost everywhere in the United States. It has minimal insect or disease problems. Fall color varies from gold to red, making it a striking addition to any landscape. It is much more hardy than the older Lombardy poplar varieties.
