

Weeping White Spruce

(Picea glauca 'Pendula')

Mature Height: 20'-30'

Mature Spread: 15'-20'

Growth Rate: Fast

Weeping White Spruce is an excellent specimen tree to accent any landscape. Its narrow shape and gracefully weeping branches work in a formal garden, or as a unique screen. Like the rest of the species, they are tolerant of some shade and drought conditions. They will grow in heavier soils than many conifers will be able to and will thrive even in urban pollution conditions. Needles are a beautiful dark green that are retained for 3-5 years. Once the trees are trained to be upright when small in the nursery, no special care should be needed to maintain their striking shape and beauty.
