

Weeping Norway Spruce

(Picea abies 'Pendula')

Mature Height: 10'-15'

Mature Spread: 8'-15'

Growth Rate: Moderate

USDA Hardiness zone: 2-7

Weeping Norway spruce are a beautiful, deep green weeping tree that makes an excellent specimen plant. As a young tree, it grows more upright with weeping branches, but as it matures, it develops a cascading appearance. They are more tolerant of wet soils than most spruces, and make an excellent addition around ponds and water features. They are less tolerant of dry winters and will do best in

an area that is sheltered from the direct inter winds. Once established, they are quite hardy, but are less drought tolerant than Colorado spruce. It is more tolerant of urban conditions and salt than other spruces.
